Texas Fields and Geological Structures

Stock#: 95340
Map Maker: The Oil and Gas Journal
Date: 1954
Place: Tulsa
Color: Color
Condition: VG
Size: 43.5 x 33.5 inches
Price: \$ 795.00

Description:

Striking Texas Petroleum Map prepared to offer insights into the influence of regional geological structures on oil and gas accumulation in Texas.

The map combines a surface oil field map with a subsurface map, showing major geological structures. This allows for a vivid understanding of how geological structures are related to oil and gas reserves.

The map aims to provide a comprehensive and objective view of how geological structures in Texas influence the accumulation of oil and gas. By overlaying maps of surface oil fields and subsurface geological features, the map demonstrates a strong relationship between the two. Features that have had a direct impact on oil and gas formation are described in detail, while features of only indirect influence or academic interest are simply outlined on the map.
