Size: 17.5 x 13 inches
Price: SOLD

Description:

Scarce map of the World on a North Polar projection, which is intended to illustrate the watersheds of the World, as the water flows from the various mountain chains to the seas.

Each chain of mountains acts as a watershed to direct the flow of the rivers. Depicts the Sea of the West, incomplete Australia and a host of other interesting features. Potter 178-79. J.A. Dezauche was the successor to Guillaume De L'Isle and Philippe Buache. His maps retain the scientific precision of his predecessors.
