**Date:** 1660  
**Place:** Amsterdam  
**Color:** Hand Colored  
**Condition:** See Description  
**Size:** 21.5 x 17.5 inches  
**Price:** SOLD

### Description:

Important early Dutch sea chart of the coast of North America from Trinity Harbor, North Carolina to Cape St. Ann, Massachusetts, which appeared in Doncker's *Zee-atlas ofte water-waereld*, first published in Amsterdam in 1660.

Doncker's chart is the third earliest Dutch sea chart of the region, preceded only by the charts of Theunis Jacobsz ( *Pascaerte van Nieu Nederlant Virginies, Nieu Engelant en Nova Francia, van C. of Faire tot C. Forchu. . . circa 1650*) and Arnold Colom ( *Pascaerte van Nieu Nederlandt uytgegeven door Hendrick Doncker . . . circa 1656*), both of which are rare to the point of being virtually unobtainable by collectors. Burden states:

*The map is largely derived from Colom's chart, although with some omissions and additions. The key to the various names of the Hudson River is left out, as is the duplicate use of Jamestown. Amongst the new nomenclature can be found Gilfort on the north shore of Long Island Sound. The coastline is virtually identical, with the exception of that part south of Cape Henry, where at first glance he appeared to draw upon Jacobsz, until one notices Chesipioock at the northern end of the Outer Banks. This usage dates back to those derived from the De Bry--White map of 1590 . . .*

Doncker's chart includes rhumb lines, compass rose, location of esturaries, settlements, sea banks or shoals, and Indian tribes. Also includes soundings and scales. Decorative cartouche includes native American man and woman, with sailing ships off the coast. This is the first edition of the map, which can be identified by the inclusion of the date (1660) in the cartouche. A second edition was published in

**Pascaert van Nieu Nederland, Virginia en Nieu Engellant Nieuelycx uytgegeven . . . 1660**

Doncker's Atlas in 1670. A third edition was published in 1680, with the plate heavily reworked and the addition of a title in English and new coastlines.

The map one of two charts of the region issued by Doncker' who also issued the 4th and 5th editions of Arnold Colom's 1656 *Pascaarte van Nieu Nederlandt uytgegeven door Hendrick Doncker . . .* in 1670 and 1676 respectively, both of which were separately published and would also have been bound into composite atlases of the period.

Hendrik Doncker was a famous bookseller in Amsterdam, who started with the age of 22 years and ran his shop successfully for fifty years. He published his first sea atlas around 1659. Due to the fact, that Hendrik Doncker corrected and improved his charts more frequent then other well known map makers, as van Loon, Goos or Theunis, his business was quite successful and there was a high demand for his works and this reflected also the various improved and corrected editions of sea atlases he published. This map was published in a composit sea atlas by Pieter Goos, who was 'one of the best known maritime booksellers of Amsterdam' (Koeman), he published a number of different sea-atlases or pilot books, his work was very much derivative. With his 'Zee-Atlas' he relied heavily on Hendrick Doncker's 'Zee-Atlas' of 1659.

**Detailed Condition:**

Minor loss along the neat lines, expertly reinstated in facsimile. The chart has been cleaned and flattened, to reduce old staining, which is still visible.
