Carte Universelle Du Commerce, c'est a dire Carte Hidrographique, ou sont exactement decrites, Les Costes des 4 Parties du Monde, Avecque les Routes pour la Navigation des Indes, Occidentales et Orientales . . . 1674.

Stock#: 40063
Map Maker: Du Val
Date: 1674
Place: Paris
Color: Outline Color
Condition: VG+
Size: 21 x 14.5 inches
Price: SOLD

Description:

First state of Pierre Du Val's scarce 17th Century map of the World, illustrating the most important world trade routes during the middle of the 17th Century.

Du Val's map is constructed on a plane projection and illustrates the scientific approach to cartography then being championed by the French, free of the embellishments then in favor in the Netherlands. The map shows the World as known in the middle of the 17th Century, including many of the great cartographic myths of the period, including

- The Island of California
- Terre de Iesso, extending nearly to America
- The Straits of Anian
- The Northwest Passage
- The Unknown Southern Continent and incomplete mapping of Australia and New Zealand
- Narrow Strait of Magellan, Strait of LeMaire and Brower's Passage, between South America and the mythical Antarctic Coastline.

The map identifies the routes to and from the "Indies Occidentales" and "Indes Orientales", with small sailing ships shown on each route. As noted by Shirley, the routes illustrated are those used by French and English ships, rather than the more southerly routes across the Indian Ocean, and then to the north, preferred by the Dutch.

Carte Universelle Du Commerce, c'est a dire Carte Hidrographique, ou sont exactement decrites, Les Costes des 4 Parties du Monde, Avecque les Routes pour la Navigation des Indes, Occidentales et Orientales . . . 1674.

Du Val's map is perhaps most noteworthy for its fascinating depiction of "Terres Ant-Arctiques dites Australes et Magellaniques et Inconnues" retaining much of the mythical information that was more common on 16th Century maps, including places popularized by Marco Polo, such as the Kingdoms of Psitac (short for Psitacorum, the Land of Parrots), Beach, Lucac and Maletur (the Kingdom of Malaiur or Malays, which was placed by Marco Polo at the Southeast end of the Malay Peninsula).

Marked on the outlines of New Holland are the names of the coasts discovered by the Dutch. Du Val was at the time one of the proponents of a pre-1606 discovery of Australia by the French. On one of his other world maps of the period, he adds the following annotation on the incomplete Australian Continent: "ou l'an 1504 aborda le nomme Gonnevillle qui en ramen a en Normandie Essonier [sic], fils du Roy d'Arosca" (where in the year 1504 landed Gonnevillle who brought back from there Essonier, son of King Arosca). While not specifically mentioned Gonnevillle, Du Val's map seems to have been influenced by the then current story of the French discoveries in the Southern Hemisphere by an explorer named Gonnevillle in 1504. The French explorer Captain Binot Paulmyer de Gonnevillle claimed to have discovered the southern continent in 1504. As noted by Howard Fry in *Alexander Dalrymple and the Expansion of British Trade*,

Gonnevillle had left Normandy in command of the Espoir in 1503, and after visiting the Canaries and Cape Verde, he had apparently crossed the Equator on a south-southwesterly heading, until he had been driven off course by a violent gale when in the latitude of the Cape of Good Hope. In January, 1504, he had then sighted land, where for the following six months he and his crew had lived on friendly terms with the natives, one of whom accompanied them on their return voyage. This was Esomeric, the son of a local ruler. Back in the English Channel, the Frenchmen had been attacked by an English pirate, and had lost their ship and papers. Many of the crew, however, survived, including Essomeric, and in an effort to get redress from the English, Gonnevillle made a statement to the naval authorities, an authenticated copy of which survived. The memory of this voyage remained alive, but the document gave no clue as to where this discovery was to be placed, and later interpretations were to include South America, Madagascar and even Australiasia, to the south of the Moluccas.

Du Val was then serving as Royal Geographer to the King of France and his maps were of great commerical and geopolitical importance.

The map is rare on the market, especially in the first state. Later editions appeared in 1677 and 1686, with revised dates on the map.
