## [Proof State - Benjamin Franklin's Chart of the Gulf Stream] *Remarques Sur la Navigation de Terre-Neuve a New York afin d'eviter les Courants et les bas-fonds au Sud de Nantucket et du Banc de George . . .*

**Stock#:** 41161  
**Map Maker:** Le Rouge / Franklin / Folger  
**Date:** 1782  
**Place:** Paris  
**Color:** Uncolored  
**Condition:** VG+  
**Size:** 15 x 13.5 inches  
**Price:** SOLD

### Description:

Previously unknown proof state of the Franklin / Folger map of the Gulf Stream, the first true chart of the Gulf Stream, commissioned by Benjamin Franklin and engraved under the direction of Le Rouge in 1782, in Paris.

This proof state predates the inclusion of Le Rouge's advertisement text at the bottom right (*A Paris / Chez Le Rouge rue des Grands Augustins, ou trouve des Cartes detaillees de totes les Provinces de l'Ameique Septentrionale . . .*). There are also vertical guide lines at the top left of the title, not present in the regular first edition. As the present example is from a composite atlas (see details below), there may have been a very limited run pre-dating Le Rouge's addition of the advertising imprint or this may be a true proof, not originally intended for distribution. The verso suggests that it was bound with a single horizontal fold into a composite atlas, as it bears the manuscript notation "Nouvelle Bretagne" and "no 86" on the verso, along with an ink stamped "86."

As the map was commissioned by Benjamin Franklin during his time in Paris as American Ambassador, the addition of the Le Rouge's advertising details at the end of the engraving process would be logical, as Le Rouge may have believed, until the end, that Franklin intended the map only for private distribution. In December 1776, Franklin was dispatched to France as commissioner for the United States. Franklin remained in France until 1785. During this time, Franklin also persuaded Le Rouge to publish a French

### **[Proof State - Benjamin Franklin's Chart of the Gulf Stream] Remarques Sur la Navigation de Terre-Neuve a New York afin d'eviter les Courrants et les bas-fonds au Sud de Nantucket et du Banc de George . . .**

edition of Hutchins' seminal map: {{ inventory\_detail\_link('39955') }}

The Gulf Stream is one of the most important natural phenomenon affecting navigators in the Atlantic Ocean. First named by Benjamin Franklin, the Gulf Stream is a high speed river within the ocean, flowing from the Gulf of Mexico, around the southern tip of Florida and along the East Coast of North America to Cape Hatteras, before turning eastward across the Atlantic Ocean, where it continues to Iceland, the British Isles and Norway. In the Straits of Florida, the Gulf Stream is about 40 miles wide and flows at about 5 miles per hour. In the Atlantic, it is over 100 miles wide and flows at about 3 miles per hour.

The strength of the flow of the current was first observed by Ponce de Leon on his return trip from St. Augustine, Florida in 1513. His pilot, Anton de Alaminos, utilized his observations to chart a course for Cortes' treasure ships returning from Mexico which significantly shortened the transatlantic voyage home. While the Spanish sailed the Gulf Stream waters for centuries, they managed to keep the existence of the Gulf Stream a secret from other nations.

The western portion of the "Northeast Current," as it was known before Franklin named it the Gulf Stream in 1762, was first described by Walter Haxton, a captain engaged in shipping tobacco from his Maryland farms to London merchants. In 1735 Haxton drew the first large-scale mariner's chart of Chesapeake Bay, giving detailed soundings and sailing directions. He included, as an addendum to the chart, latitude and longitude points locating the "Northeast Current" along with estimates of the current's velocity. While Haxton advocated use of the current for future crossings, he was largely ignored.

Benjamin Franklin began his study of the Gulf Stream in 1768, while serving as the postmaster of the British Colonies in North America. Franklin had observed that the westward crossings were taking 2 weeks longer than the return journey and observed that this was a result of the current. Franklin discussed the matter with his cousin Timothy Folger, a Nantucket Sea Captain who had worked his way up the ranks on New England fishing and merchant ships, who informed him of the current and his experiences. Franklin in turn asked Folger to compose a chart showing the location of the Gulf Stream.

Franklin transmitted the finished chart to the British Postal Service and suggested that it be published for use by British Sea Captains charged with transmitting mail across the Atlantic. Instead of publishing a new map, the Post Office utilized an old chart of the Atlantic published by Mount & Page and had Folger's information engraved on what amounted to an obsolete chart in 1768. The charts were distributed to Packet Captains for a brief period of time, but were largely ignored.

In 1775 and 1776, Franklin made two Atlantic crossings, during which time he tested the water

temperatures in and out of the Gulf Stream and determined that the waters in the stream were warmer. This revived his interest in the Folger chart. On his arrival in Paris, he had it copied and printed by Le Rouge. Franklin intended to provide copies to all French ship captains carrying arms and supplies to the American colonies.

The original Folger charts - as printed for and distributed by Franklin - disappeared and were assumed lost for almost two centuries until September 1978, when Philip L. Richardson of the Woods Hole Oceanographic Institution found two copies in the Bibliotheque Nationale in Paris. They were most likely obtained and saved by the French during the years from 1776 to 1785 when Franklin was envoy to France for the American colonies.

The Mount & Page example of the map is extremely rare, so much so that it was not known to have survived until an example was discovered in 1978. There are no known example in private hands, making this map the earliest printed illustration of Franklin's conception of the Gulf Stream available to collectors.

In 1786, after the Revolutionary War, Benjamin Franklin published Folger's sketch of the Gulf Stream as part of an article in the Proceedings of the American Philosophical Society of Philadelphia. In the article, Franklin wrote: The Nantucket whalemens, being extremely well acquainted with the Gulf Stream, its course, strength and extent, by their constant practice of whaling on the edges of it, from their Island quite down to the Bahamas, this draft of that stream was obtained from one of them, Captain Folger, and caused to be engraved on the old chart in London for the benefit of navigators by B. Franklin.

Until the discovery of this proof state, Franklin's Gulf Stream chart was generally thought to have survivee in 3 forms.

1. Franklin seems to have acquired and distributed examples to family members upon his return to America, many of which were inscribed. Several examples of these inscribed copies can be found in American institutional collections.
2. The chart was also bound into the very rare *Pilote Neptune Septentrionale* . . . published by Le Rouge.
3. Lastly, it appears that a group of about 15-20 examples of the map were left unbound and never issued. These were apparently located by a French or British bookseller sometime in the first half of the 20th Century and sold to the Old Print Shop in New York City, where they were slowly sold off over the next several decades.

The present example is a previously unrecorded proof state, not previously known or seen on the market.
