**Map Maker:** Sanson  
**Date:** 1656  
**Place:** Paris  
**Color:** Hand Colored  
**Condition:** VG+  
**Size:** 21.5 x 12.5 inches  
**Price:** SOLD

#### Description:

First state of Sanson's landmark regional map of North America, being the first large scale map to depict California and the Southwest and Sanson's first large format regional map of any portion of North America.

Sanson's map of the southern part of North America has the distinction of being the first large format regional map of North America prepared by this highly influential French mapmaker. His revolutionary approach to the presentation of geographical knowledge on a printed map was responsible not only for the advancing French cartographic knowledge to the forefront of Europe's mapping of the New World, but perhaps even more importantly was responsible for profoundly altering the style and discipline associated with the graphic depiction of cartographic imagery, the essence of the map maker's art for the next 100 years. Before Sanson, the era begun by the Italian perspective artists of the 15th and 16th Centuries was refined in the Low Countries by the skills of the fine master engravers of the Golden Age of Dutch Cartography. Maps were objectivized not only for their content, but also as works of art. In Sanson's work, the embellishment of geographical imagery begins to give way to the science of geographical and spatial depiction. While it would be another 100 years before the mapmaker's art would truly be eclipsed by science, Sanson's work is without question an important point of inflection in this history, adding importance to this, his first large format regional map of North America.

Sanson's map is the earliest to concentrate on Spanish territories from Florida to California and provided a prototype for other mapmakers over the next 50 years. Engraved by Jean Somer, it improves upon Sanson's *Amerique Septentrionale* in many ways. Amongst them is the first application of ERIE LAC to a recognizable lake. The depiction of California as an island was one of two most influential models (the other being the Briggs model), and was used as a model by many later cartographers.

**Le Nouveau Mexique et La Floride: Tirees de diverses Cartes, et Relations . . . 1656**

First published separately, the map appeared in Sanson's atlases and later in composite atlases for the next 70 years. The Pierre Mariette in the title, is the son of Nicolas Sanson's business partner of the same name, who provided the original investment for Sanson's business, but died in 1657. The Northwest Coastline is substantially revised from Sanson's map of North America. The Rio Grande, still mistakenly flowing southwest, includes many new Indian Names not present in the map of North America. The curious peninsula at the top of the Northwest Coast of the mainland (Agubela De Cato), is of unknown origin.

This is the first edition of the map, which can be identified by the date on the map (1656) and the imprint "Chez Pierre Marriett, Rue S. Iaue...1656." The second edition imprint reads: "Chez l'Autheu...1656." A third edition adds an "r" to the word "Autheu," but retains the 1656 date. The fourth edition is dated 1679.

**Detailed Condition:**

A tiny bit of foxing, else fine.
