(Gulf Stream Map -- Atlantic or Western Ocean)

Stock#: 43145
Map Maker: American Philosophical Society /
Jones
Date: 1802
Place: Philadelphia
Color: Uncolored
Condition:
Size: 19 x 12 inches
Price: \$1,800.00

Description:

Important early American chart illustrating the Gulf Stream, engraved by Benjamin Jones in Philadelphia and published by the American Philosophical Society.

This chart illustrates an early model of the Gulf Stream from the Gulf of Florida north to the Grand Bank then curving southeast to the Senegal coast of Africa which is labeled "Azanhaga." Arrows mark the direction of the stream, with the winds shown from northeast to southwest and an annotation noting the "usual course from Britain to the West Indies, Carolina, and Virginia for sake of the Trade Winds" south of the stream and "course from Britain to St. John in Newfoundland" north of the stream.

The map is based on a Pownall chart published by Robert Sayer in his *West India Pilot* in 1787. It was copied by John Thompson in his *New General Atlas* of 1827, wherein Thompson credits Pownall.

The map is from the American Philosophical Society's Transactions, volume V, Philadelphia, 1802, illustrating William Strickland's 'On the Use of the Thermometer in Navigation', the map bound before page 104, the lecture read to the Society on 16th May 1800, referring to observations made by Strickland in an Atlantic crossing in 1794.

The author talks about having received Volume III (1793) of the Transactions, with Jonathan William's article on Thermometrical Navigation, just before sailing, and was inspired to make his own readings, as reported in the lecture.

Mapping the Gulf Stream

The Gulf Stream is one of the most important natural phenomenon affecting navigators in the Atlantic

(Gulf Stream Map -- Atlantic or Western Ocean)

Ocean. First named by Benjamin Franklin, the Gulf Stream is a high speed river within the ocean, flowing from the Gulf of Mexico, around the southern tip of Florida and along the East Coast of North America to Cape Hatteras, before turning eastward across the Atlantic Ocean, where it continues to Iceland, the British Isles, and Norway. In the Straits of Florida, the Gulf Stream is about 40 miles wide and flows at about 5 miles per hour. In the Atlantic, it is over 100 miles wide and flows at about 3 miles per hour.

The first chart to record the Gulf Stream based on Benjamin Franklin's discoveries was Mount & Page's *A New and Exact Chart on Mr. E. Wrights projection and Mercators Chart Con~ ye Sea Coast of Europe, Africa, & America, from ye Isle of Orkney to Cape Bona Esperance & Hudsons Bay to ye Straits of Magellan*. The Mount & Page chart is known in only three examples.

Benjamin Jones

Benjamin Jones was an engraver in Philadelphia active between 1778 and 1815. According to an announcement in a local newspaper, Jones was married to Miss Alice Howard Hall. And he was apparently still living in 1833.

The American Philosophical Society was formed in Philadelphia in 1769. Its mission was "the promoting of useful Knowledge in general, and such branches thereof in particular, as may be more immediately serviceable to the British Colonies." It met regularly to hear papers submitted by its members and others and in 1771 published the first volume of its Transactions.
