Map of the County of Suffolk.

Stock#: 50271
Map Maker: Burr
Date: 1829
Place: New York & Albany
Color: Hand Colored
Condition: VG+
Size: 18.5 x 33 inches
Price: SOLD

Description:

Early Map Showing the Villages of Southampton, Bridgehampton, Sagg Village, Wainscott, East Hampton, Sagg Harbor, and Amagansett.

One of the best maps of Suffolk County and the east end of Long Island from the first half of the 19th century.

The map shows detail in the Hamptons and up to Montauk Point. Shelter Island is shown. The map starts at Huntington in the west.

David H. Burr (1803-1875) was one of New York's premier cartographers and surveyors, in the first half of the 19th century. He was responsible for a definitive state atlas of New York, first published in 1829. He was also the cartographer of a series of very rare and important postal maps of regions of the United States.

David Burr is one of the most famous, yet ironically little-understood mapmakers of the first part of the 19th Century. His two most famous works, the *Postal Atlas of the United States* (1839) and *Atlas of the State of New York* (first published in 1829) are among the most important cartographic works of their respective genres, yet relatively little is known about Burr.

David H. Burr originally worked under Simeon DeWitt, New York State's Surveyor General at the beginning of the 19th century. Burr had a brief career as a lawyer and an aide-de-camp for New York Governor De Witt Clinton, before being appointed to his first position in charge of a team surveying a portion of the state for a proposed road in 1825. He then succeeded in getting approval from the state legislature to compile an atlas that included maps of each county as well as a separate map of the entire state. The maps were dated 1829, but not actually published until early 1830. Burr's atlas has the

Map of the County of Suffolk.

distinction of being the second atlas published in the 19th century of one of the individual states in the U.S., preceded only by Mill's *Atlas of South Carolina* (1825).

In the 1830s, Burr produced an important early map of Texas and was in the process of publishing his *New Universal Atlas* in the late 1830s, when he was apparently offered work as a mapmaker for the United States House of Representatives. He produced several maps for the House, before beginning work for the Post Office on a series of maps which would become his most important work.

Work on the postal maps was completed by the end of 1839, at which time Burr contracted with John Arrowsmith in London to print the maps. During this time period, he fell out of favor with the prevailing powers in the House of Representatives, and by 1841 his position with the government had been terminated. In this same time period, he petitioned the US Government for a tariff exemption on the import of his *Postal Atlas* and separate maps, which he apparently wished to distribute privately. The tariff exemption was turned down, leaving Burr with a \$10,800 unpaid printing bill and financially bankrupt.

Of equal interest, Burr's title of Topographer of the United States Post Office and Geographer to the House of Representatives, may, in fact, have been self-appointed titles. In the House of Representatives committee proceedings which resulted in his censure and termination, Burr was classified as a clerk and his superiors were derided for having allowed temporary clerical positions to have grown far beyond their intended scope, perhaps because of the political weight carried by Burr's older brother, who seems to have initially recruited Burr into government service.

During his time with the Post Office, Burr produced his *Postal Atlas* of the United States. This "atlas" is one of the great rarities of American 19th-century cartography, with complete sets being virtually unobtainable for modern collectors. John Arrowsmith engraved the plates in London, an unusual collaboration at this late a date between an American cartographer and a London engraver.

Burr also served as surveyor to the states of Florida and Louisiana, then returned to Washington and became geographer to the U.S. Senate. In the 1850s, President Franklin Pierce named him the surveyor general of Utah Territory, whereas the top-ranking federal official in the territory, he was "heavily involved with the legal and jurisdictional disputes between Mormon leaders and the U.S. government" (Ristow).
