## [ Corona Borealis ]

**Stock#:** 50654  
**Map Maker:** Bayer  
**Date:** 1603 circa  
**Place:** Augsburg  
**Color:** Hand Colored  
**Condition:** VG+  
**Size:** 15 x 11 inches  
**Price:** SOLD

### Description:

#### ***With Manuscript Annotations Showing Neighboring Constellations in an Early Hand***

Fine example of Bayer's celestial chart of Corona Borealis, with the stars heightened in gold. The present example has no text on the verso.

Corona Borealis is a small constellation in the northern sky. Its name is Latin for "northern crown", a name inspired by its shape; its main stars form a semicircular arc. It was one of the 48 constellations listed by the 2nd century astronomer Ptolemy and remains one of the 88 modern constellations.

Bayer's *Uranometria*, is one of the most important celestial atlases of the 17th Century and the forerunner of all star atlases which contained 51 star charts, of which 48 were Ptolomeic constellations.

Each plate has a carefully engraved grid, so that star positions can be read off to fractions of a degree. These positions were taken from the catalog of Tycho Brahe. Brahe's catalog had circulated in manuscript in the 1590s, but was not published until 1602.

Another important feature of the Bayer's atlas was the introduction of a new system of stellar nomenclature. Bayer assigned Greek letters to the brighter stars, generally in the order of magnitude, so that the bright star in the Bull's eye became alpha Tauri (and the brightest star in the Centaur became our familiar alpha Centauri.) These letters were placed on the charts themselves, and also in a table that accompanied each chart. Bayer's charts are rarely offered separately on the market.
