## The Countries Round the North Pole . . . 1875

**Stock#:** 60286  
**Map Maker:** Stanford  
**Date:** 1875  
**Place:** London  
**Color:** Color  
**Condition:** VG+  
**Size:** 24.5 x 24.5 inches  
**Price:** \$1,400.00

### Description:

#### *First Site of Stanford's Rare Map of the Polar Regions*

Fine example of Edward Stanford's map of the North Polar Regions, featuring the furthest most points reached by numerous exploring expeditions.

Published on December 2, 1878, the map notes the names and dates of explorers, from the earliest time up to Julius von Payer's Austro-Hungarian Expedition (1872-74), which resulted in the discovery of Franz-Josef Land, along with other discoveries by the same expedition in 1873.

Centered on the North Pole, Stanford's map reaches as far south as 50° North Latitude. All countries are distinguished by their own colors, and major geographic and oceanic features are labeled.

Most interesting, is the labeling of the furthest-most points of literally dozens of expeditions of discovery, along with the corresponding dates (printed in red). These extend chronologically from Sebastian Cabot's supposed visit to northern Newfoundland in 1497 to the Austro-Hungarian expedition of 1872-74. All the great names are mentioned, including Frobisher, Davis, Hudson, Baffin, Barents, Bering, Franklin, Nordenskjold, Ross and Peary, amongst many others. The amount of information featured on the map is truly extraordinary, and is unrivalled by any Arctic map of comparable size.

---

**The Countries Round the North Pole . . . 1875**

The map was issued Edward Stanford, then Britain's leading map publisher, in an effort to capitalize on the great contemporary interest in Polar expeditions, seen as the 'last frontier' in global exploration. Stanford had good connections with academic institutions such as the Royal Geographical Society and government bodies such as the Admiralty, so was always able to gain the most accurate information. The present map was one of Stanford's series of progressively updated maps of the Arctic Regions, the first of which was published around 1875, and the last issued in the 1930s.

**Rarity**

This is the first example of the 1875 edition we have seen on the market (dealer catalogs and auctions listed by *Rare Book Hub*) since a Francis Edwards Catalog entry in 1982.

**Detailed Condition:**

Dissected and laid on linen, with original covers. Minor soiling.
