**Continuation of The Survey of Cape Fear River Executed in 1839 Lieut. James Glynn,
U.S Navy**

Stock#: 62646
Map Maker: Glynn
Date: 1839
Place: Washington
Color: Uncolored
Condition: Good
Size: 20 x 60 inches (2 sheets--size if joined)
Price: \$ 1,200.00

Description:

Rare 2-sheet map of a section of the Cape Fear River, prepared under the direction of James Glynn in 1839, as part of the US Navy's search for a suitable port for the establishment of a Southern Navy Yard and printed by P. Haas, Lithy., Washington D.C.

The map covers a section of the Cape Fear River from Wilmington, North Carolina, to Graham's Island.

Continuation of The Survey of Cape Fear River Executed in 1839 Lieut. James Glynn, U.S Navy

In 1839, the United States Navy commissioned a survey of 4 southern harbors, for the purpose of establishing a Southern Navy Yard. James Glynn (1800-1871), who would later distinguish himself as the leader of negotiations with Japan during their "close country" period, led the expedition, which would ultimately include the charting of Beaufort, Wilmington (Cape Fear River), Sapelo (Georgia) and Doboy (Georgia) as possible locations. Among the officers on the expedition was Matthew Fontaine Maury.

The survey of Cape Fear resulted in the creation of several highly detailed charts of the River and Harbor, including 4-sheet [*Chart of The Entrance of Cape Fear River Surveyed By Order of The Honorable J.K. Paulding, Sec. of the Navy. Executed by Lieutenant James Glynn, Commanding. Lieut. M.F. Maury*](#) (46 x 79 inches), a *chart of the Cape Fear River* (92 x 21 inches) and a *Continuation Chart of the Survey of the Cape Fear River*. The resulting charts, along with others the areas surveyed around Beaufort, were apparently issued in a bound portfolio in 1843, although the present example of the map is signed by its makers as having been executed in December 1839. The area shown in this map includes Smithville (now South Port), the future Fort Fisher and the area at the south end of the modern Military Ocean Terminal-Sunny Point.

The survey expedition was led by Lieutenant James Glynn in command of two ships, the *Experiment* and the *Engineer*. A fascinating side note for the expedition was the involvement of Mathew Fontaine Maury. Maury would go on to become a leading scientific figure and a commander in the CSA Navy, serving as the Confederacy Chief of Sea Coast, River and Harbor Defenses. Following the Civil War, Maury would go on to achieve worldwide acclaim as an astronomer, historian, oceanographer, meteorologist, cartographer, author, geologist, and educator. He was nicknamed *Pathfinder of the Seas* and *Father of modern Oceanography and Naval Meteorology*, and later, *Scientist of the Seas*, due to the publication of his extensive works in his books, especially *Physical Geography of the Sea* 1855, the first extensive and comprehensive book on oceanography to be published. Maury made many important new contributions to charting winds and ocean currents, including pathways for ships at sea.

Following his survey of harbors of Beaufort and Wilmington and the inlets of Sapelo and Doboy, Maury was detached from the *Engineer* at Norfolk, first travelling home to Fredericksburg and then on to visit his Parents in Tennessee. It was on his trip back to the ship after leaving Tennessee that Maury was injured in a Stage Coach accident near Somerset, Ohio, which effectively ended his career at sea. It was during his recovery that he wrote a number of important works, including his advocacy for a formal school for naval training, one of most influential works leading to the establishment of the United States Naval Academy (although Maury suggested Memphis, Tennessee for the academy location). As one commentator noted, Maury's misfortune on the journey home from Tennessee may have launched one of the most distinguished scientific careers of the 19th Century.
