Stock#: 64382
Map Maker: Wheeler
Date: 1871
Place: Washington
Color: Color
Condition: VG
Size: 17 x 16 inches
Price: SOLD

Description:

Early Grand Canyon Topographical Map

Detailed map of a portion of Nevada and Arizona, centered on the Hualapais Valley.

The map covers the area from Grand Canyon National Park in the north to Las Vegas, Flagstaff, Sedona, Kingman and Bullhead City in the south showing remarkable topographical details in the region.

The Wheeler Survey was a survey of a portion of the United States lying west of the 100th meridian. It comprised multiple expeditions, and was supervised by First Lieutenant (later Captain) George Montague Wheeler. Wheeler led early expeditions from 1869 to 1871 in the west, and in 1872 the US Congress authorized an ambitious plan to map the portion of the United States west of the 100th meridian at a scale of 8 miles to the inch. This plan necessitated what became known as the Wheeler Survey. The survey's main goal was to make topographic maps of the southwestern United States.

In addition he was to ascertain everything related to the physical features of the region; discover the numbers, habits, and disposition of Indians in the section; select sites for future military installations; determine facilities available for making rail or common roads; and note mineral resources, climate, geology, vegetation, water sources, and agricultural potential. The Wheeler Survey lasted until 1879,
