## (Apollo 15) Apollo Translunar / Transearth Trajectory Plotting Chart

**Stock#:** 69046  
**Map Maker:** NASA / Aeronautical Chart and Information Center  
**Date:** 1971  
**Place:** Washington, D.C.  
**Color:** Uncolored  
**Condition:** VG  
**Size:**  
**Price:** SOLD

### Description:

Fascinating diagram showing the complex trajectories of Apollo 15 as it made its way from Earth to the Moon, orbited the moon, landed, and then returned to Earth.

The chart was prepared several months before the launch of Apollo 15. It was no doubt intended as an instructional tool so those involved in the mission could have a clear picture of the complex course of the crew.

Extensive notes and tables give still more details about the mission. The introductory paragraph to the text on the right side reads:

*This chart displays a polar view of the mission profile for Apollo 15, scheduled to be launched July 26, 1971 targeted to Lunar Landing Site Hadley Rille.*

The note in the lower-left corner says "Prepared under the direction of the Department of Defense by the Aeronautical Chart and Information Center, United States Air Force for the National Aeronautics and Space Administration 1st Edition, March 25, 1971."
