Carte du Cours des planetes et des Cometes

Stock#: 73566
Map Maker: Anonymous
Date: 1715 circa
Place: Paris
Color: Uncolored
Condition: VG
Size: 21.5 x 21.7 inches
Price: \$ 2,200.00

Description:

Rare (?) French language map of the Solar System, from an unknown source.

The map provides a detailed depiction of the solar system, based upon a depiction first prepared by William Whiston in 1712 and published by John Senex in London.

The map illustrates the orbits of the comets known to Edmund Halley and Whiston at the beginning of the 18th Century, based upon Newton's model. Each comet is illustrated by its orbit.

William Whiston was an English theologian, historian, and mathematician, who succeeded Isaac Newton as Lucasian Professor of Mathematics at the University of Cambridge. His *A New Theory of the Earth from its Original to the Consummation of All Things* (1696), articulated Whiston's belief that the global flood of Noah had been caused by a comet, a position which won him praise from Newton. Whiston and Halley were both advocates for the periodicity of comets, although Whiston also believed that comets were responsible for past catastrophes in earth's history.

The original map was first prepared by Whiston in 1712, likely to illustrate his public lectures on Newton's astronomical teachings, and thereafter copied and modified for most of the 18th Century.

The map notes:
