[Cape Town and Environs]

Stock#: 76602
Map Maker: Valentijn
Date: 1724
Place: Amsterdam
Color: Uncolored
Condition: VG+
Size: 14 x 11 inches
Price: SOLD

Description:

One of the earliest printed maps of Cape Town, from Valentyn's Oud en Nieuw Oost-Indien.

This early plan of Cape Town and environs is drawn by the brilliant and entertaining Dutch chronicler, François Valentijn.

In 1652, Jan van Riebeeck and other employees of the Dutch East India Company (VOC) were sent to the Cape to establish a way-station for ships travelling to the Dutch East Indies, and the Fort de Goede Hoop (later replaced by the Castle of Good Hope). Under Van Riebeeck and his successors as VOC commanders and later governors at the Cape, an impressive range of useful plants were introduced to the Cape - in the process changing the natural environment forever. Some of these, including grapes, cereals, ground nuts, potatoes, apples and citrus, had an important and lasting influence on the societies and economies of the region.

The map includes Casteel Good Hope, built by the Dutch East India Company between 1666 and 1679. In 1682 the gated entry replaced the old entrance, which had faced the sea. The fortress housed a church, bakery, various workshops, living quarters, shops, and cells, among other facilities, and ("New East-India"), a book about the history of the Dutch East India Company and the countries of the Far East.

Valentijn was born in 1666 in Dordrecht, Holland, but spent significant time in the tropics, notably in Ambon, in the Maluku Archipelago. In total, Valentijn lived in the East Indies 16 years. Valentijn was first employed by the Dutch V.O.C. or East India Company (Vereenigde Oost-Indische Compagnie), at the age of 19, where he served as Minister to the East Indies. He returned to Holland for about ten years, before

returning to the Indies in 1705, where he was to serve as Army Chaplain on an expedition in eastern Java. He again returned to Dordrecht where he wrote his *Oud en Nieuw Oost-Indien* (1724-26), a massive work of five parts published in eight volumes and containing over one thousand illustrations and including some of the most accurate maps of the Indies of the time. He died in The Hague, Netherlands, in 1727.

Valentijn probably had access to the V.O.C.'s archive of maps and geographic secrets which they had always guarded jealously. Johannes Van Keulen II became Hydrographer to the V.O.C. in the same year Valentijn's book was published. It was in Van Keulens time that many of the VOC charts were published, one signal of the decline of Dutch dominance in Spice Trade. Valentijn was fortunate to have seen his work published, as the VOC (Dutch East India Company) strictly enforced a policy prohibiting former employees from publishing anything about the region or their colonial administration. And while, as Suárez notes, by the mid-18th Century the Dutch no longer feared sharing geographic secrets, the execution of this policy was still erratic and based on personal motives.

While Valentijn's maps and diagrams were prized possessions, his scholarship, judging by contemporary standards, was not of the highest integrity. While current standards of referencing and plagiarism were not in effect during the 18th Century, Valentijn's borrowed liberally from other scientists' and writers. E.M Beekman referred to Valentijn as an "exasperating Dutch braggart," but nevertheless cites him as an important figure and given his writing style, diction and penchant for story, one of the greatest Dutch prose writers of the time-going so far as to suggest comparison between one of the various stories in his work and a Chaucerian tale.

Valentijn's work is one of the truly great maps showcasing the European geographical knowledge of South and East Asia and Australia from the early 18th Century.
