Iwo Jima

Stock#: 80829
Map Maker: Terrain Model Workshop, US
Navy
Date: 1945
Place: Honolulu, HI
Color: Hand Colored
Condition: VG
Size: 18.5 x 24 inches
Price: SOLD

Description:

Exceptionally Rare U.S. Military Terrain Model of Iwo Jima, Made in 1945.

Foam and rubber terrain model map of Iwo Jima, probably made by the U.S. Navy Reserve group "Building 14", Hawaii, which was in charge of U.S. military model making in the Pacific.

This model is dated September 1945, and so was made either in the closing days of the War or shortly after V-J Day. Though the Battle of Iwo Jima had technically concluded five months earlier, the process of transforming Iwo Jima into a forward B-29 base and of quelling all guerilla action continued for months afterward; indeed, the last two Japanese holdouts on Iwo Jima surrendered in 1949.

The model prominently features the three Japanese airfields on the island, as well as Mount Suribachi, where Joel Rosenthal took one of the most famous photos of the War, of the raising of the U.S. flag by six Marines.

Iwo Jima

Mapping Iwo Jima

World War II terrain maps are very scarce on the market. We have located one other terrain map of Iwo Jima that was prepared in 1944-'45. [An example sold at Bonham's in 2015 for \\$11,250](#). It was quite a bit larger than our own, though the condition was quite a bit more deteriorated. There is another [terrain model of Iwo Jima at the International Museum of World War II](#).

Terrain Model Project

3D terrain modeling became a central focus of United States military mapmaking during the Second World War. The utility of these models in planning for bombing raids, ground assaults, and post-capture infrastructure development had been established by the British during World War I, and during the Second World War, they passed their know-how onto the United States. The U.S. military established several model-making workshops, first on the East Coast, then in Hawaii as the war in the Pacific became the focus. The production of the models was extremely time-consuming, with each one being meticulously hand-painted to match aerial photos. Many models were prepared for D-Day, the largest of which would have stretched an astounding 45 x 65 feet when pieced together.

Production of 3D terrain models is given a good overview at the following website: <http://www.terrainmodels.com/war.html>

The terrain maps of Iwo Jima were taken aboard vessels that participated in the invasion and were used to acquaint Marines, sailors, and airmen with their target.

The model was probably partially made by pantograph and finished by hand. See the following link for more background information: <http://www.terrainmodels.com/pantograph.html>

The present model was probably produced in "Building 14" the U.S. Navy Reserve workshop in Hawaii.

Detailed Condition:

Hand-coloring rather more detailed than on the two other examples we have handled. Spotting in the ocean. Preserved in a later wood and plexiglass frame.
