**Place:** Washington, D.C.  
**Color:** Color  
**Condition:** VG+  
**Size:** 9.5 x 7.75 inches  
  
**Price:** SOLD

### Description:

Fantastic 1969 photograph of the lunar surface from the Apollo 11 Lunar Module, in orbit above the moon and preparing to land at site 2.

The verso includes the text of the NASA press release to accompany the image:

*Describe this photograph: The approach to Apollo landing Site 2 is seen in this photograph taken from the Apollo 11 lunar Module in lunar orbit. When this picture was made, the LM was still docked to the Command and Service Modules. Site 2 is located in the center near the edge of darkness. The crater Maakelyne is the large one at lower right. Hypatia Rille (U.S. 1) is at upper left center, with the crater Moltke just to the right (north) of it. Sidewinder Rille and Diamond- [text missing] the picture. This view of southwestern Sea of Tranquility looks generally west.*
